Global Low and Medium Capacity Gas Generator Market 2016-2020

Description: About LMC Gas Generator

Generators convert mechanical energy into electrical energy. The source of mechanical energy varies, from an internal combustion engine, a hand crank to compressed air and a reciprocating steam engine. An internal combustion engine uses either diesel, gasoline, propane gas, or natural gas to produce mechanical energy, which is transformed into electrical energy with the help of a generator assembly. Generators are designed to provide temporary AC or DC power. They serve as a source of backup or emergency power for residential, commercial, and industrial applications. A fuel engine powers a typical generator.

The analysts forecast the global low and medium capacity gas generator market to grow at a CAGR of 8.5% during the period 2016-2020.
