Description:

Availability of advanced and highly efficient fuel injection systems and demand generated for such systems in the emerging economies such as Asia-Pacific and Latin America are the major factors influencing the growth of this market.

Increases in disposable income globally has generated demand for fuel injection systems for passenger cars segment. With the increase in disposable incomes of the population, the demand for vehicles in Europe has been increasing significantly. Since the demand for fuel injection systems is directly proportional to the demand for vehicles, the increase in vehicle production is expected to drive the growth of the fuel injection systems market in the region.

Significant increases in the registration of commercial vehicle in 2015 and a rise in demand of passenger cars in emerging economies boosted the fuel injection market in Europe.

The European region holds a significant market share in the passenger cars segment. The increase in vehicle production and the demand for fuel efficient vehicles are the major factors contributing to the growth of the fuel injection system market in this region. Furthermore, the various technological advancements in recent years have resulted in the introduction of different fuel injection systems that are extensively being used across the automobile industry in Europe. Germany is the largest contributor to the automobile industry in Europe, in terms of vehicle production.
