Global Corn-Maize Seed Treatment Market - Growth, Trends And Forecasts (2015-2020)

Description:
The market for seed treatment gains in significance due to a number of factors, prominent among which are agronomic trends that comprise development of high quality seeds through the enhanced potential offered by genetically modified organisms (GMOs), changes in climatic conditions, increasing rates of crop rotation, flexibility in sowing approaches and greater pressure from regulatory requirements. Primary requirements of seed treatment include capability of offering good protection during the germination period, supporting early plant development and enhancing stress tolerance at an early stage. These can be achieved by improving the quality of seed treatment products that offer ease of application at low rates. In short, it may be summed up that the foundation for the future lies in the concept of innovation in seed treatment.

The global market for seed treatment in corn/maize is estimated at US$1.3 billion in 2015 and is further forecast to maintain a CAGR of 8.9% between 2015 and 2020 to exceed US$2 billion. Accounting for a collective share estimated to be 70% in 2015, North America and South America are the largest markets for seed treatment in corn/maize applications. In terms of growth in demand, though, Asia-Pacific is expected to witness the fastest 2015-2020 compounded annual rate of 10.8%.

Syngenta, Bayer CropScience and BASF are the top three players in the global seed treatment market, with all of them having an extensive portfolio of agricultural products and solutions. While BioWorksInc, Advanced Biological Marketing Inc and Valent USA Corp are comparatively smaller players, they offer the potential of becoming big game changers in the area of seed treatment in future. Each company has adopted an individual approach in terms of strategy for future growth. A few have focused on horizontal growth by expanding their presence in emerging markets that offer greatest scope for future prospects, while yet others have been content to operate within their established boundaries and go in for vertical growth by concentrating on innovations in the area of products and solutions.
