
Description: Following the successful publication of the 1st edition in 2009, the 2nd edition maintains its aim to provide an application-driven package of essential techniques in image processing and GIS, together with case studies for demonstration and guidance in remote sensing applications. The book therefore has a 3 in 1 structure which pinpoints the intersection between these three individual disciplines and successfully draws them together in a balanced and comprehensive manner.

The book conveys in-depth knowledge of image processing and GIS techniques in an accessible and comprehensive manner, with clear explanations and conceptual illustrations used throughout to enhance student learning. The understanding of key concepts is always emphasised with minimal assumption of prior mathematical experience.

The book is heavily based on the authors' own research. Many of the author-designed image processing techniques are popular around the world. For instance, the SFIM technique has long been adopted by ASTRUM for mass-production of their standard Pan-sharpen imagery data. The new edition also includes a completely new chapter on subpixel technology and new case studies, based on their recent research.

Contents: Overview of the book xi

Part I Image processing

1 Digital image and display 3

1.1 What is a digital image? 3

1.2 Digital image display 4

1.3 Some key points 8

1.4 Questions 8

2 Point operations (contrast enhancement) 9

2.1 Histogram modification and lookup table 9

2.2 Linear contrast enhancement (LCE) 11

2.2.1 Derivation of a linear function from two points 12

2.3 Logarithmic and exponential contrast enhancement 13

2.4 Histogram equalisation (HE) 14

2.5 Histogram matching (HM) and Gaussian stretch 15

2.6 Balance contrast enhancement technique (BCET) 16

2.7 Clipping in contrast enhancement 18

2.8 Tips for interactive contrast enhancement 18

2.9 Questions 19
3 Algebraic operations (multi-image point operations) 21

3.1 Image addition 21

3.2 Image subtraction (differencing) 22

3.3 Image multiplication 22

3.4 Image division (ratio) 22

3.5 Index derivation and supervised enhancement 26

3.6 Standardization and logarithmic residual 29

3.7 Simulated reflectance 29

3.8 Summary 33

3.9 Questions 34

4 Filtering and neighbourhood processing 35

4.1 FT: Understanding filtering in image frequency 35

4.2 Concepts of convolution for image filtering 37

4.3 Low pass filters (smoothing) 38

4.4 High pass filters (edge enhancement) 42

4.5 Local contrast enhancement 45

4.6 FFT selective and adaptive filtering 46

4.7 Summary 52

4.8 Questions 52

5 RGB IHS transformation 55

5.1 Colour coordinate transformation 55

5.2 IHS de-correlation stretch 57

5.3 Direct de-correlation stretch technique 58

5.4 Hue RGB colour composites 60

5.5 Derivation of RGB IHS and IHS RGB transformation based on 3D geometry of the RGB colour cube 63

5.6 Mathematical proof of DDS and its properties 65

5.7 Summary 67

5.8 Questions 67

6 Image fusion techniques 69

6.1 RGB IHS transformation as a tool for data fusion 69

6.2 Brovey transform (intensity modulation) 71

6.3 Smoothing filter based intensity modulation 71
14.4 Selecting appropriate coordinate systems 189
14.5 Questions 189
15 Operations 191
15.1 Introducing operations on spatial data 191
15.2 Map algebra concepts 192
15.3 Local operations 194
15.4 Neighbourhood operations 199
15.5 Vector equivalents to raster map algebra 206
15.6 Automating GIS functions 209
15.7 Summary 209
15.8 Questions 210
16 Extracting information from point data: Geostatistics 211
16.1 Introduction 211
16.2 Understanding the data 211
16.2.1 Histograms 212
16.3 Interpolation 214
16.4 Summary 224
16.5 Questions 225
17 Representing and exploiting surfaces 227
17.1 Introduction 227
17.2 Sources and uses of surface data 227
17.3 Visualising surfaces 230
17.4 Extracting surface parameters 236
17.5 Summary 245
17.6 Questions 246
18 Decision support and uncertainty 247
18.1 Introduction 247
18.2 Decision support 247
18.3 Uncertainty 248
18.4 Risk and hazard 250
18.5 Dealing with uncertainty in GIS-based spatial analysis 250
18.6 Summary 254
18.7 Questions 255

19 Complex problems and multi-criterion evaluation 257
19.1 Introduction 257
19.2 Different approaches and models 258
19.3 Evaluation criteria 259
19.4 Deriving weighting coefficients 260
19.5 Multi-criterion combination methods 263
19.6 Summary 272
19.7 Questions 272

Part III Remote sensing applications

20 Image processing and GIS operation strategy 275
20.1 General image processing strategy 276
20.2 Remote sensing-based GIS projects: From images to thematic mapping 284
20.3 An example of thematic mapping based on optimal visualisation and interpretation of multi-spectral satellite imagery 284
20.4 Summary 292

21 Thematic teaching case studies in SE Spain 293
21.1 Thematic information extraction (1): Gypsum natural outcrop mapping and quarry change assessment 293
21.2 Thematic information extraction (2): Spectral enhancement and mineral mapping of epithermal gold alteration and iron-ore deposits in ferroan dolomite 299
21.3 Remote sensing and GIS: Evaluating vegetation and landuse change in the Nijar Basin, SE Spain 308
21.4 Applied remote sensing and GIS: A combined interpretive tool for regional tectonics, drainage and water resources in the Andarax basin 318

22 Research case studies 335
22.1 Vegetation change in the Three Parallel Rivers region, Yunnan Province, China 335
22.2 GIS modelling of earthquake damage zones using satellite imagery and digital elevation model (DEM) data 345
22.3 Predicting landslides using fuzzy geohazard mapping: An example from Piemonte, north-west Italy 369
22.4 Land surface change detection in a desert area in Algeria using multi-temporal ERS SAR coherence images 380

23 Industrial case studies 389
23.1 Multi-criteria assessment of mineral prospectivity in SE Greenland 389
23.2 Water resource exploration in Somalia 405
Part IV Summary

24 Concluding remarks 419
24.1 Image processing 419
24.2 Geographic Information Systems 422
24.3 Final remarks 425

Appendix A Imaging sensor systems and remote sensing satellites 427
A.1 Multispectral sensing 427
A.2 Broadband multispectral sensors 431
A.2.1 Digital camera 431
A.2.2 Across track mechanical scanner 432
A.2.3 Along track push broom scanner 433
A.3 Thermal sensing and TIR sensors 434
A.4 Hyperspectral sensors (imaging spectrometers) 434
A.5 Passive microwave sensors 436
A.6 Active sensing: SAR imaging systems 437

Appendix B Online resources for information, software and data 441
B.1 Software proprietary, low cost and free (shareware) 441
B.2 Information and technical information on standards, best practice, formats, techniques and various publications 441
B.3 Data sources including online satellite imagery from major suppliers, DEM data plus GIS maps and data of all kinds 442

Payment Information

Please indicate the payment method you would like to use by selecting the appropriate box.

☐ Pay by credit card: You will receive an email with a link to a secure webpage to enter your credit card details.

☐ Pay by check: Please post the check, accompanied by this form, to:
Research and Markets,
Guinness Center,
Taylors Lane,
Dublin 8,
Ireland.

☐ Pay by wire transfer: Please transfer funds to:
Account number 833 130 83
Sort code 98-53-30
Swift code ULSBIE2D
IBAN number IE78ULSB98533083313083
Bank Address Ulster Bank,
27-35 Main Street,
Blackrock,
Co. Dublin,
Ireland.
