Global Oncology Biosimilars Market 2016-2020

Description: About Oncology Biosimilars

Cancer represents a huge burden on healthcare systems worldwide due to the high cost of treatment therapeutics. The patent expiry of many cancer therapeutics enables the entry of biosimilars into the market. Biosimilars are being incorporated into oncology treatment practices in the supportive care setting. Biosimilars are synthesized with the use of biologic components such as monoclonal antibodies, proteins, hormones, nucleic acids, colony stimulating factors, interleukins, and enzymes.

The analysts forecast the global oncology biosimilars market to grow at a CAGR of 31.76% during the period 2016-2020.
