Iran Oil and Gas Report Q2 2016

Description: Gas production and consumption will see a substantial ramp-up in 2016 due to new phases of South Pars increasing gas availability. The lifting of sanctions in January 2016 will allow for oil production to increase by around 600,000b/d by year-end. New refining capacity will eradicate net fuels imports from 2017.

We highlight the following trends and developments in Iran's oil and gas sector:

- Sanctions were lifted on January 16 2016, restarting financial and economic connections with non-US countries

- In this view Iran will be able to increase oil production to up to 600,000b/d, adding an average of 400,000b/d over 2016

- Total has reportedly agreed a 150,000-200,000b/d oil export agreement with Iran, though the timeframe remains unclear
