Description: The laser processing market is estimated to grow from USD 6.40 billion in 2015 to USD 9.75 billion by 2022, at a CAGR of 6.13% from 2016 to 2022. This growth can be attributed to use of lasers in cutting, drilling, welding, and engraving for automobiles, mobile and other electronic devices, disk lasers, laser doping of solar cells and many other application areas.

Solid lasers are expected to account for the largest share of the overall laser processing market during the forecast period. In addition, due to the increase in the demand for lasers from machine tools, microelectronics, and medical verticals, the laser processing market is expected to gain traction in the next six years. The laser processing technology market for defense, architecture, and automotive sectors is also expected to witness growth during the forecast period.

The laser processing market in APAC is expected to grow at the highest CAGR between 2016 and 2022. The rapid adoption of laser systems in machine tools, microelectronics, and automotive sectors in this region and increase in the usage of solid, liquid, and gas lasers mainly CO2, fiber, excimer, YAG, and semiconductor are contributing to the growth of the laser processing market in APAC.
