Automotive Composites Market - Forecasts from 2016 to 2021

Description:
A composite material is made from two or more materials, resulting in superior properties and structural performance better than each of its constituents. This has led to a surge in demand for these materials across various industries. Automotive is one such industry which has embraced composites for various applications like powertrain, interior and exterior furnishing.

These composites are being preferred over alloys in vehicles to reduce overall weight and improve performance. Chemical corrosion resistance is another major advantage of these composites augmenting the demand for composites in the automotive industry. These composites also increase the versatility and durability of the vehicle without increasing its weight. Resistance to heat and external impact, low carbon dioxide emission superior fuel efficiency, improved appearance and safety among others are some major advantages of the composites in automobiles.

Automotive Composites Market is expected to reach a global market size of $6.491 billion by the end of forecast period, at a compound annual growth rate of 7.92% from 2016 to 2021.
