Petroleum Resin Market by Type (C5, C9, Hydrogenated Hydrocarbon Resins and C5/C9 Resins), Application (Adhesive & Sealants, Printing Inks, Paints & Coatings), End-Use Industry (Building & Construction, Tire) and by Region - Global Forecast to 2021

Description: “Upward growth for the building & construction industry, substantiating the petroleum resins market growth”

The global petroleum resins market size is projected to reach USD 2.58 billion by 2021, at a CAGR of 7.7%. The growth is due to petroleum resins’ properties such as high chemical resistance, miscibility, low odor, low molecular weight, low solution viscosity, and inherently high solubility. These unique properties make it a valuable product for building & construction end-use industry which further drive the petroleum resins market.

“Increasing future opportunities for hydrogenated hydrocarbon resins is a major driver of the petroleum resins market”

Petroleum resins are segmented into four major types such as C5 petroleum resins, C9 petroleum resins, hydrogenated hydrocarbon resins, and C5/C9 petroleum resins. Hydrogenated hydrocarbon resins are expected to register the highest growth rate between 2016 and 2021. The properties such as less pollutant, chemical resistance, high adhesion strength, helped in driving the market for these resins in various applications such as paints & coatings, printing inks, rubber compounding, and adhesives & sealants.

“Rising demand from developing economies is a major driver of the petroleum resins market”

In 2015, Asia-Pacific is estimated to register the highest growth rate between 2016 and 2021, and is estimated to remain the same in the next five years. Growing end-use industries such as automotive, personal hygiene, and tire in this region highly drive the market. China led the demand for petroleum resins due to increased demand of building & construction activities in the last few years.
