Global Fertility Services Market 2016-2020

Description: About Fertility Services

Couples with fertility issues are unable to conceive even after regular unprotected coitus. Infertility complications are widespread, with either female or male infertility factors accounting for one-third of the cases. In the rest of the cases, the cause is either unknown or a combination of both male and female infertility factors.

Low sperm production, abnormal sperm function, or blockages that prevent the delivery of sperm are some of the factors that can lead to infertility in males. Hormonal changes, fallopian tube damage, endometriosis, and cervical abnormalities are factors that can lead to infertility in women. Diagnosing the cause of infertility can be difficult, but people with fertility issues can choose from a variety of treatment options, depending on the underlying problem.

The analysts forecast the global fertility services market to grow at a CAGR of 8.72% during the period 2016-2020.
