Utility tractor are more user friendly, compact, high power operation agrimachinery used for various purpose as agriculture, landscaping, ploughing, grounds keeping.

Western Europe is the second largest market for utility tractor application. The ease of fixing and detaching supporting parts is the important feature of this machine. Also it is widely used to such farms where farmers cannot afford to keep multiple machinery for agriculture operations.

The major driver for the market are continuous innovation in technology in agrimachinery, minimising the need for multi machinery for agriculture, increase in demand of agriculture products as a result of growing population, government subsidies for agro machinery to farmers. The compact design, high efficiency and moderate price range among other tractors are driving the market However the fluctuations in grain prices which led to lower farm income creates unwillingness for farmers to invest in the purchasing equipment's. The availability of other similar functioning machinery for agriculture function is being a restrain for the market. The high power and energy requirement for tractors to complete the agriculture operations are also affecting the market. Growing urbanization has resulted in decrease of farmland which is also major factor affecting its market growth.

Market segmentation of utility tractors are categorised by the application type, by drive type and by geography. In the application type market is further segmented into three types as dairy field operations, hay & agriculture products operations and landscaping. Utility tractors have major applications in hay and agriculture products. The market segment by drive type includes pedestrian type and wheeled type. Wheeled type market is sub segmented into two, three and four wheel type. Wheel type utility tractor has a major market than the track type.
