Global Agricultural Micronutrients Market 2016-2020

Description: About Agricultural Micronutrients

Agricultural micronutrients are vital nutrients, which are required in trace amounts, to control certain physiological activities in crops to increase the yield and improve quality. The deficiency of these micronutrients causes deterioration in the growth rate, withering of buds, and yellowing of leaves in crops.

Molybdenum, manganese, boron, zinc, copper, and iron are the most commonly used agricultural micronutrients. The purpose of application of agricultural micronutrients is not constant globally; it differs with the crop type and soil type.

These micronutrients serve the following purposes:

- Increasing the land productivity
- Improving the quality of the crops

The analysts forecast the global agricultural micronutrients market to grow at a CAGR of 8.43% during the period 2016-2020.
