Arthroscopy Procedures and Products Market: Global Industry Analysis and Opportunity Assessment, 2015-2023

Description: Arthroscopy is a minimally invasive procedure for visualisation, diagnosis and treatment of joint problems. During arthroscopy procedure, surgeons inserts an arthroscope, which is a fibre-optic video camera, through a keyhole size incision. It allows arthroscopists to view inside the joint through a high-definition video monitor and determine the amount or type of injury, and further perform arthroscopy without the need of a large incision. An arthroscopy is used to treat a range of problems, such as damaged cartilage and fragments of loose bone or cartilage, as well as conditions such as arthritis and frozen shoulder or carpal tunnel syndrome.

The Arthroscopy Procedures and Products market is segmented as follows:
