Global Ulcerative Colitis Market 2016-2020

Description:

About Ulcerative Colitis

Ulcerative colitis is a type of inflammatory bowel disease (IBD) that affects the colon and rectum. Inflammation and ulcers are formed in the innermost lining of the colon and rectum, resulting in the production of pus and mucus. Based on the extent of inflammation and the location, ulcerative colitis can be of different types: ulcerative proctitis, proctosigmoiditis, left-sided colitis, pancolitis or universal colitis, and fulminant colitis. Abdominal cramps, diarrhea, and rectal bleeding are among the common symptoms observed in individuals with the disease. Medications such as 5-aminosalicylates, steroids, purine analogs, immunomodulators, and biologics are used to treat the disease.
