
Description:
A servomotor is a rotary actuator that allows for precise control of angular or linear position, velocity and acceleration, servo drive is a special electronic amplifier used to power electric servo motor.

A servo drive receives a command signal from a control system, amplifies the signal, and transmits electric current to a servo motor in order to produce motion as per command signal. Servo motors are high performance alternative. Servo motors in the fields of application where speed requirement is 2000 rpm or higher.
