Global Spinal Implants Market 2016-2020

Description: About the Spinal Implants Market

Spinal implants help correct the deformities of the spine, facilitate bone fusion, and strengthen and stabilize the spine. Conditions such as chronic pain due to degenerative disc diseases (DDDs) and fractures in the spine caused by trauma or osteoporosis can be treated through surgeries that involve the implantation of spinal implants for bone fusion. Spondylolisthesis, scoliosis, disc herniation, and spinal stenosis are some of the other spinal disorders. Spinal implants are composed of metals such as titanium, titanium alloy, and stainless steel or bio-absorbable materials. In the market, various types of spinal implants of different shapes and sizes as per the requirement of all age groups are available.

The analysts forecast the global spinal implants market to grow at a CAGR of 5.91% during the period 2016-2020.
