Global Activated Carbon Market By Type (Powdered Activated Carbon, Granular Activated Carbon and Others), By Raw Material (Wood, Coconut Shells, Coal and Others), By Application, Competition Forecast and Opportunities, 2011-2021

Description: Activated Carbon is a non-graphite form of carbon, produced upon activation of raw material such as coal, coconut shells, wood chips, etc., by subjecting them to physical modification and thermal decomposition under a specific ambient temperature and environment.

Globally, water and wastewater treatment segment is the largest end user industry where activated carbon is used for removal of impurities from contaminated wastewater or drinking water through the process of adsorption. Moreover, activated carbon is also used in air purification processes in automotive industry, food and beverage processing industry, metal recovery and pharmaceutical drug manufacturing processes. Powdered activated carbon is the most widely used form of activated carbon across the globe owing to its excellent adsorption properties in both gas and liquid phase applications.

According to “Global Activated Carbon Market By Type, By Raw Material, By Application, Competition Forecast and Opportunities, 2011-2021”, global activated carbon market is projected to witness a CAGR of more than 9% over next five years, on the back of increasing implementation of stringent regulations related to water and air pollution control, increasing application of activated carbon in filters used in automotive sector and food & beverage processing industries, and across various other applications in pharmaceutical and medical sector.

In 2015, Asia Pacific was the largest market for activated carbon, with strong demand emanating from China, Japan and India. Calgon Carbon Corporation, Cabot Corporation, Osaka Gas Chemicals Co., Limited, Kuraray Co., Limited are few of the largest players operating in global activated carbon market.
