Global Oleochemicals Market (By Application, Type, Raw Material, Region): Opportunities and Forecasts (2016-2021)

Description: Driven by the rise in the consumption of bio degradable products among the growing population due to high purchasing power combined with environmental safety has led to the growth in the demand of oleochemicals market globally.

Oleochemicals are used to reduce toxic content of product. These are used in various applications such as manufacturing soap, cosmetic, personal care products, lubricants, and also used in pharmaceutical; and food and beverage industry. Therefore, growing demand by end users and its renewability feature are resulting in the demand of oleochemicals.

Growing awareness among the consumers related to healthier alternatives, due to which the market for natural raw materials is witnessing stronger performance. Also, availability of raw material in abundance is making the product manufacturing cost effective.

Due to the additional benefits to the human health, there has been growing focus on oleochemical derived products on account of higher awareness among the population mainly in developing economies.

Global Oleo Chemicals Market is forecasted to grow at a CAGR of 7.48% during 2016-2021, on account of rising consumption of plant based raw materials further producing fatty acids, fatty alcohols and glycerine used in end industrial use such as Soaps and Detergents, Pharmaceutical, Food and Beverage and others. APAC region remains the major market followed by Europe in the actual period. In the forecast period, APAC region will continue to witness strong growth driven by countries such as Malaysia, Indonesia, India and China.
