In Vitro Fertilization (IVF) Asia-Pacific Market - Opportunities and Forecasts, 2014 - 2020

Description:

In-vitro fertilization is a type of assisted reproductive technology that helps women in conceiving. The Asia Pacific embryo transfer market, valued at $1.9 billion in 2014, is estimated to reach $3.5 billion by 2020. Delayed pregnancy in women is one of the major driving factors of the embryo transfer market, as the chances of conceiving lowers with age. The success rate of getting pregnant with embryo transfer technique is higher in the age group of 35-39. Other driving factors of the embryo transfer market are rise in infertility rate due to rise in stress levels, change in life style and fertility related diseases. Globally, around 15% of the couples faces infertility issues in which males contribute to 20-30% of the overall cases.

The major limiting factors of this market are the cost involved and lower success rates in the treatment. Patients may not conceive in the first cycle of embryo transfer procedure. Patients have to undergo many cycles to achieve pregnancy, and this adds to the overall cost. The average cost of this procedure is approximately $3,000- $8,000. This acts as a major limitation, in adoption of the technique, for people with low income. Another challenge is the low level of awareness in the developing economies such as Nigeria, India, Indonesia among others. Awareness can be created through medical tourism and availability of low cost embryo transfer treatments. The companies profiled in this report include Vitrolife AB, Cooper Surgical. Inc., Cook Medicals, Thermo Fisher Scientific, Irvine Scientific Inc., Genea Biomedx, Oxford Gene Technology, Auxogyn Inc., EMD Serono Inc. and Ovascience Inc.
