Security Robots Market - Forecast to 2022

Description:
The global security robots market is in its growing phase, it is expected to reach USD 2.36 billion by 2022, at a CAGR of 8.56% between 2016 and 2022. Rising geopolitical instabilities and territorial conflicts and increasing adoption of unmanned solutions by different military and defense forces are the major drivers for the global security robots market.

The market for UUVs is expected to grow at the highest CAGR during the forecast period. Different navy agencies such as the US and Canadian naval agencies are preparing to upgrade their undersea warfare by deploying UUVs such as autonomous underwater vehicles (AUV) for a wide range of missions, including mine counter measure, harbor security, and search and salvage operations. This is driving the demand for UUVs.

Spying is the most important strategy in the modern warfare, which enable the defense forces to generate battlefield intelligence and thus, have an edge over the opposition. Security robots such as UAVs are used extensively by the US Army and NATO alliances to keep a watch on the militants and their activities in the regions affected by the extremist organizations.

The major driver for the security robots market in North America is the increasing use of advanced weapons and technology in the region for overseas contingency operations such as Afghanistan, Syria, and Iraq. The market in APAC is estimated to grow at the highest CAGR during the forecast period. Increasing defense budgets in the developing countries of APAC is a major factor contributing to the growth of the security robots market in this region.
