Global Analgesics Market 2016-2020

Description: About the Analgesics Market

Analgesics are among the most commonly prescribed drugs for pain, especially that from fractures, ankle sprains, and other injuries. These are designed particularly for pain relief. Opioids, NSAIDs, and local anesthetics are the major analgesics used to treat pain. The long term use of analgesics has been linked to gastrointestinal problems. Pain is treated with analgesics, also called as pain killers, many of which are accessible without a prescription, including acetaminophen, aspirin, or ibuprofen. These medicines are termed as non-prescription or OTC analgesics and can be used either alone for mild pain or in combination with other medicines for severe pain.

The analysts forecast the global analgesics market to grow at a CAGR of 4.28% during the period 2016-2020.
