Insect Pests of Millets

Description: Insect Pests of Millets: Systematics, Bionomics, and Management focuses on protecting the cultivated cereals that many worldwide populations depend on for food across the semi-arid tropics of the world. Providing coverage of all the major cultivated millets, including sorghum, pearl millet, finger millet, barnyard millet, proso millet, little millet, kodomillet, and foxtail millet, this comprehensive book on insect pests is the first of its kind that explores systematics, bionomics, distribution, damage, host range, biology, monitoring techniques, and management options, all accompanied by useful illustrations and color plates.

By exploring the novel aspects of Insect-plant relationships, including host signaling orientation, host specialization, pest-host evolutionary relationship, and biogeography of insects and host plants, the book presents the latest ecologically sound and innovative techniques in insect pest management from a general overview of pest management to new biotechnological interventions.

- Includes the most comprehensive and relevant aspects of insect systematics, including synonyms, nomenclatural history, and identification characters to quickly guide readers to desired information
- Addresses aspects of insect-plant relationships, including host signaling and orientation, host specialization, pest-host evolutionary relationship, and biogeography of insects and host plant
- Presents the latest research findings related to the ecological, behavioral, and physiological aspects of millet pests

Contents:
1. Introduction
2. Systematics and Phylogeny
3. Biology, Behaviour and Ecology
4. Insect-Plant Relationships
5. Pest Management Strategies & technologies
