United States Membrane Market By Type (Microfiltration, Reverse Osmosis, Ultrafiltration and Others), By Application (Water and Wastewater Treatment, Haemodialysis, Pharmaceutical, Chemical, etc.), Competition Forecast and Opportunities, 2011-2021

Description:
Membranes are microporous films made from single or composite polymers and used for the purpose of filtration. Based on pore size, membranes are broadly classified into three major categories, Microfiltration, Reverse Osmosis and Ultrafiltration.

Other types of membranes that are popular in the US are pervaporation, nano filtration and electrodialysis membranes. All these aforementioned categories of membranes are used in various application industries such as water & waste water treatment, pharmaceutical, hemodialysis, chemical, and food & beverage industry.

Microfiltration membranes account for the largest share in United States market in value terms, on account of their increasing application in various application industries. Owing to their ability to provide high purity water, demand for reverse osmosis membranes is expected to increase at a robust pace in the coming years.

According to “United States Membranes Market By Type, By Application, Competition Forecast and Opportunities, 2011 - 2021”, the country's membrane market is projected to grow at a CAGR of 8% during 2016-2021. Increasing government investments for setting up water treatment plants in the US is also expected to drive demand for membranes by water & waste water treatment industry over the next five years.

With water deficient conditions prevalent across various parts of the country, implementation of water conservation and water recycling strategies to reuse the water has become a priority, which is augmenting demand for membranes in the country. Over the next five years, membrane use in medical applications such as hemodialysis and pharmaceutical industry in the US is also expected to grow at a rapid pace.
