Global Epilepsy Drugs Market 2016-2020

Description: About the Epilepsy Drugs Market

Epilepsy is characterized by recurrent seizures caused by the improper balance between inhibitory and excitatory signals in the brain. The symptoms of epilepsy, caused by brain malformations and tumors, birth trauma, and high-risk pregnancies, can be benign or life-threatening. A majority of epilepsy cases have an unknown etiology.

Etiology

Etiology varies according to the age of a person. Some individuals genetically inherit the disease while the cause of the disease in others is unknown. Head injuries, tumors, autism spectrum disorder, or stroke can also cause the disorder.

The analysts forecast the global epilepsy drugs market to grow at a CAGR of 4.45% during the period 2016-2020.

Covered in this report

The report covers the present scenario and the growth prospects of the global epilepsy drugs market for 2016-2020. To calculate the market size, the report considers revenue generated from the sales of branded and generic drugs used to treat and prevent epilepsy and related seizures. The report also considers the revenues to be generated from the sales of drugs that are expected to be launched into the market along with the decline in revenues from the patent expiries of marketed drugs during the forecast period.

The market is divided into the following segments based on geography:
