Smart Grid Market by Solution (Advanced Metering Infrastructure, Smart Grid Distribution, Smart Grid Communication, Grid Asset Management, Geographic Information System and Billing & Customer Information System), by Service - Global Forecast to 2021

Description: The smart grid market size is estimated to grow from USD 19.8 million in 2016 to USD 65.4 million by 2021, at a Compound Annual Growth Rate (CAGR) of 27.0% due to the increasing need for replacing aging infrastructure, mandatory regulations and policies, need for centralized grid distribution management and control, and increasing concern for reducing carbon footprints.

The smart grid distribution management segment is estimated to have the highest CAGR during the forecast period as they are responsible for the support of utilities demand response management programs, micro-grids, distribution automation, outage management, network optimization, and workforce management. The major growth drivers identified for the smart grid distribution management market are rising smart grid technology market, increasing adoption of distributed renewable generation, and regulatory pressure for reducing carbon emission. Globally, the market is witnessing substantial investments in R&D and marketing channels.

North America is expected to hold the largest share of the smart grid market in 2016 due to increasing spending on energy efficiency programs coupled with regulatory government mandates in the U.S. and Canada. Asia-Pacific (APAC) is expected to grow at the highest growth rate during the forecast period due to rapid smart grid deployments in China, Japan, and India, along with Australia, Singapore, New Zealand, and South Korea.
