Air Starter Market by Type, End-Use Industry & by Region - Trends & Forecasts to 2021

Description: The air starter market is projected to reach USD 397.0 million by 2021, at a CAGR of 3.8% from 2016 to 2021. Rising demand for compact explosion-proof ATEX-approved engine starting devices in major end-use industries such as oil & gas, aviation, and mining in regions, such as North America and Europe, are driving the market growth. Air starters are employed for engine starting in almost all major industries, including oil & gas, aviation, mining, and marine. Given the growing demand for compact and efficient engine-starting devices in these industries, the demand for air starters is set to increase in the coming years but at a gradual growth rate.

With regard to industrial end-user, the aviation industry is the fastest growing segment. Rise in global air traffic and investments in civil and military aviation are the major driving factors. Moreover, rising urbanization and increasing pressure existing in the aviation infrastructure have led to growing investments in the civil & military aviation industry across the globe.

The North American region has the highest adoption of air starters and it is the largest market for air starters. The U.S. is the key contributor to the growth of the air starter market in North America. The region has witnessed rising demand for air starters; this trend is expected to continue in the future since activities in major end-user industries are growing. The increasing demand for compact engine-starting devices coupled with compatibility to explosive and potentially hazardous environments would likely to boost the demand for air starters in the region.
