
Description: Biostimulants are biological material which are used to enhance the plant growth when applied to the soil. They help in modifying the environment to fuel existing bacteria capable of bioremediation. These are natural substances, which comprise modified composites applied to soil and plants. This is essential to prevent and improve the crop's physiological processes. They boost the overall growth of the plants by improving yields, crop quality and strength. They are applied to crops in limited quantity in amalgamation with other fertilizers and plant inputs.

Biostimulant industry is segmented as acid-based or extract-based biostimulants. Acid-based biostimulants are classified as humic acid, fulvic acid, amino acids, and others. Extract-based are classified as seaweed-based biostimulants, plant extract-based biostimulants and others. Amongst these, ingredients, acid-based biostimulants acquire the major market of this industry owing to the easy access of raw materials and efficiency in crop improvement. In this report, the biostimulant market is segmented in terms of crop types and application types. Row crops and fruits & vegetable segment cover the major market of the biostimulant industry. Foliar are the prime application type in this market.

The biostimulant industry is rapidly growing even being at initial stage of growth. This growth is derived from the fertilizer companies and from increasing awareness for crop protection. Leading companies in the biostimulant sector are Biostadt India Limited, Valagro S.p.A, Arysta LifeScience Corporation, and Koppert B.V.
