Wireline services is a cabling technology especially used by the Oil & Gas wells operators used to insert equipment or measurement devices inside the well for conducting well intervention, logging, completion, and reservoir evaluation. The measurement tools and equipment inserted into the well provide real-time data from the wells which helps field engineers to control the process parameters.

The prospects for wireline services in the O&G industry are remarkable due to the increasing production activities in the industry. Wireline services continue to rise in the oilfield due to the increasing cabling needs of the oil and gas companies. The wireline services help the companies in keeping the oil and gas production operations economical in terms of time and cost which acts as a major driver for global wireline services market.

The overall wireline services market has been segmented based on type, application, sector and by well type. Based on type, the market is segmented into electric line and stick line wireline. Based on application, the market is segmented into wireline logging, intervention, completion and recovery. By sector, the market is segmented into on-shore and off-shore; by well type, the market is classified into open hole and cased hole.
