
Description: The power sector is composed of the entities which generate, transport and distribute electricity to consumers. The generating sector consists of the electrical utility industry, other utilities, industry and commerce which generate and consume electricity.

The “wires” industry consist of the transmission and distribution companies which transport and distribute the electricity from generators to consumers. Altogether, the power sector is colossal, the global infrastructure is enormous and the financial resources required correspondingly large.

41% of final electricity consumption is by industry, 23% by commerce and 28% is residential and the balance by public services and railways.
