Global Hypercholesterolemia Drugs Market 2016-2020

Description: About Hypercholesterolemia

Hypercholesterolemia is characterized by high levels of total cholesterol and LDL-C in the blood. High cholesterol levels can cause CVDs such as stroke and atherosclerosis. The typical range of total blood cholesterol is 140-200 mg/dL. Blood cholesterol contains individual components such as LDL-C and HDL-C. LDL carries cholesterol to the body and HDL removes cholesterol from the cells by reversing cholesterol transport to the liver.

The analysts forecast the global hypercholesterolemia drugs market to decline at a CAGR of 6.78% during the period 2016-2020.
