Saudi Arabia Switchgear Market (2016-2022): Market Forecast by Types (Air Insulated, Gas Insulated, Hybrid and Others), Voltage, Verticals and Regions and Competitive Landscape

Description:

Saudi Arabia is the leading switchgear market in the GCC region attributed to large scale investments in the power transmission and distribution sector along with regional interconnection of transmission networks. Furthermore, increasing penetration of private players in the power sector and growing infrastructure expansion activities in industrial and commercial verticals are some of the factors contributing to the demand for switchgear in the country.

The Saudi Arabian switchgear market is projected to reach $2.9 billion by 2022. The grid strengthening and interconnection of regions which involves the establishment of more than 25 substations is likely to fuel the demand for switchgears. High voltage switchgears have acquired the highest revenue share owing to an increasing need for these in the power utility segment. The power utility segment accounted for a majority of the revenue share in the Saudi Arabian switchgear market. Over the next six years, the commercial and industrial segments are forecast to exhibit strong growth in the market.

Amongst all regions, eastern, central and western regions captured the largest revenue shares in the country. During 2016-22, central and western regions are expected to register larger number of switchgear installations.

This report thoroughly covers the market by switchgear types, by voltage, by verticals, and by regions. The report provides unbiased and detailed analysis of the on-going trends, opportunities/ high growth areas and market drivers, which will help stakeholders to devise and align market strategies according to the current and future market dynamics.
