Global Biosimilars Market 2016-2020

Description: About Biosimilars

Biosimilars are defined as the follow-on versions of original biological medicines. These are separately developed after the patent protecting the original product has expired. Biosimilars are intended to have the same MOA as original biological drugs and are designed to treat the same diseases as the innovator’s product. They have many similarities, but are not identical to, the reference biopharmaceutical product.

The analysts forecast the global biosimilars market to grow at a CAGR of 55.52% during the period 2016-2020.
