Global Asthma Therapeutics Market 2016-2020

Description: About Asthma Therapeutics

Increasing allergic rhinitis is a major factor for allergic asthma leading to increase in research for the development of allergic immunotherapies for the treatment of asthma. The global asthma therapeutics market will observe a moderate growth during the forecast period because of loss of patent exclusivity of the major drugs, allowing the entry of generics into the market. This will lead to the erosion of the market share of the major asthma drugs. However, the presence of late-stage pipeline molecules will drive the market. An increase in the prevalence of asthma and the use of combination drugs will drive the growth of the market during the forecast period.

The analysts forecast the global asthma therapeutics market to grow at a CAGR of 4.31% during the period 2016-2020.
