Europe Building Information Modelling Market - Growth, Trends And Forecasts (2015 - 2020)

Description: The European Building Information modelling market has been estimated to be worth USD 1.01 billion in 2015, and is expected to record robust growth during the reporting period of 2015-2020. Building Information Modelling can be defined as Computer Aided Design (CAD) archetype creating a set of interacting policies, processes and technologies generating a methodology to manage the essential building design and project data in digital format, presumably in a visual representation of physical and functional characteristics of the location or construction facility, throughout its life-cycle. Governmental regulations promoting the adoption of BIM solutions have been a prime factor aiding large scale adoption in this market, the UK government has set an ambitious target of mandating the use of Level 2 BIM solutions for all publicly funded projects.

Construction activity in Europe has witnessed a marginal growth of 2% in 2015, which could be attributed to post-recession recovery in key markets. Western European countries have traditionally dominated the BIM market; they are expected to record a CAGR growth of XX.XX% over the reporting period of 2015-2020. The European Parliament has recommended the use of BIM for public projects to enhance efficiency in construction projects across Europe, all the major architecture and construction companies have backed this move in a bid to leverage the benefits of enhanced communication and co-ordination throughout the project lifecycle. The European Union has been one of the major proponents of green building solutions, BIM tools allow construction companies to realise these solutions in a timely and efficient manner.

Technological advancements in the field of reporting and analytics coupled with governmental regulations promoting the adoption of BIM solutions are the major drivers for growth in this region. However, high costs of ownership and implementation issues may impede the rate of adoption.
