Global Active Data Warehousing Market By Industry, Vendors And Geography Forecasts And Trends (2015-2020)

Description: Information is of prime importance of any organization, and Active Data Warehousing has gained traction in recent years. Active Data Warehousing can also termed as Real-time Data Warehousing and is a business-critical system for an organization, which is intended not only to support higher management with strategic decision making but also to reach executives at the ground level to support operational decision making. Active Data Warehouse is a repository that captures transactional data in any form so that they could be used to derive the desired trends and be used for future decision making.

An active data warehouse is capable of integrating data changes while maintaining batch or cycle refreshes. The Active Data Warehouse professionals are often addressed as Data Warehouse Architects, who are capable of handling enormous amount of complex data from different sources.

Traditional Data Warehouse were primarily deployed by the organizations to support strategic Business Intelligence (BI) for a few decision-makers that were responsible for strategic planning. However, in order to gain competitive advantage more and more businesses are keen to use the data at operational level. The major driver in adoption of Active Data Warehousing among the companies is the phenomenal growth of Big Data Analytics and BI. In addition, businesses today have realized the importance of empowering the middle management, and the ground staff with support, to help them with tactical decisions.
