Global Mobility Scooter Market - Strategic Assessment and Forecast Till 2021

Description: Mobility Scooter Market - Report Highlights

The report provides in-depth analysis of the market size and growth of the Worldwide Mobility Scooter market. This report also provides the detailed information and data analysis of the Worldwide Mobility scooter market about the leading market segments based on design and geographies.

Mobility Scooter by Design Type/Size

1) Boot Scooters
2) Mid-size Scooters
3) Road Scooters

Mobility Scooter by Wheels

1) 3-Wheeled
2) 4-Wheeled
3) S-wheeled

Mobility Scooter by Geography Segmentation

1) APAC
2) Europe
3) Americas
4) ROW

Further, a detailed mapping of the region wise regulations and associated legalities governing the usage of the mobility scooter is provided in the report. The report also provides market share and profiles of the key vendors operating in the Worldwide Mobility Scooter Market and further shows a detailed competitive landscape of key players.

Mobility Scooter - Market Size and Dynamics

The market Research Analysts, expect the Worldwide Mobility Scooter Market to reach approx. US $2.4 billion by 2021 and the market to grow at a CAGR of 3.08 % during the forecast period. The mobility scooters are turning out to be an ideal alternative to wheelchairs or crutches, which prove to be burdensome for those who require mobility aid.

The global personal mobility market is undergoing a dramatic shift on account of a rapid increase in adaption of cost-efficient and technology-based products and also supportive government grants that enable the elderly and disable population to be more independent.

The use of mobility scooters can help improve the self-perceived quality of life of aging population but can also have long-term detrimental effects by increasing cardiovascular risks.

The Worldwide Mobility Scooter Market has been segmented by design type /size, and geography. The US and Western Europe mainly the UK, constitute almost 70% of the market both in terms of users and revenues. North America is the largest consumer of the personal mobility devices market in 2015.

Increasing elderly population and rising demand for assistive devices, along with the presence of a sophisticated reimbursement framework working towards reducing the expenditures of patients are major factors attributing to the region's significant market share. Europe accounted for over 35% of the revenue share in the personal mobility devices market in 2015 and was the second largest consumer of mobility scooter in the forecasted period with Britain being the mobility scooter capital of Europe.
APAC is expected to grow at the fastest CAGR during the forecast period. The presence of untapped opportunities in the emerging markets of India and China and continually improving healthcare infrastructure in these markets are some of the key attributes accounting for the conclusion as mentioned earlier.

Mobility Scooter - Trends, Drivers, and Challenges

This market research report on mobility scooter provides an overview of the factors driving and restraining the growth of the Worldwide Mobility Scooter market. The report also outlines the key trends emerging in the market that will contribute to the growth of the market during the forecast period.

Some of the factors driving the growth of the mobility scooter market include advancement of technology in the healthcare sector, rising geriatric population and increasing incidences of knee disorders and disabilities in mobility. Also, the high adoption rate of these mobility aids and also the growing awareness of the types of equipment available and the presence of supportive government initiatives in this field contribute to the growth of the market.

Some of the impending challenges confronting the Mobility Scooter Market include the lack of public infrastructure in many countries and also misuse of mobility scooter by able-bodied people. The mobility scooters are intended for elderly, and disabled people use but there is an increasing use of these devices by the able-bodied population as cost-effective means due to government schemes and lead to increased obesity levels and accidents.

Also, there has been a marked change in the way people use them on account of their easier availability in second-hand market. Also, the lack of coherence on the regulations governing the classification of mobility scooters and the use of powered wheelchairs acts as a growth deterrent for the market.

One of the trend, which we expect to be imminent in the Mobility scooter market is that the market shall definitely grow in terms of its reach on account of an increased emphasis of governments and private bodies to provide affordable healthcare services. Further, the usage pattern of the mobility scooter is undergoing a dramatic shift on account of substantial growth in the second-hand market, online sales and retail advertising.

The mobility scooter has become an increasingly popular personal mobility choice with a rise in number of variants and improved designs, coupled with a change in perception governing the usage of these devices. Although there is a wide variation in regulatory approaches in different jurisdictions, there has been an enhanced recognition for these devices on account of their benefits outweighing the risks associated to users and pedestrians. The report further provides a commentary on the Porter’s five forces analysis along with a description of each of the forces and its impact on the market.
