Journal of Advances in Chemical Physics

Description: The journal covers the latest, most significant developments in chemical physics, paying special attention to the structure and physical properties of atomic and molecular systems that affect chemical behaviour, the dynamics of atomic and molecular interactions, mechanisms of chemical reactions in gas and condensed phases and at the interphase boundaries, new physical methods of examining chemical reactions, methods of stimulating chemical reactions and elementary physical processes, the kinetics and mechanism of reactions in gaseous and condensed media and at interfaces, molecular dynamics and molecular organisation, transport and phase transition processes, combustion, detonation and shockwaves.

*Twelve issues per year.
