Executive Summary

Aircraft leasing refers to the lease used by the airlines and other aircraft operators. The buyers of aircrafts are generally the big airlines, financial investors and corporates. These entities have option of either buying the aircraft directly from the original equipment manufacturer or from the aircraft leasing companies.

The aircrafts are sold on lease because their original prices are too high. So to maintain a diversified portfolio of the aircrafts, the purchasing entity holds them on lease as the leasing companies reduces the financial burden of buying and maintaining the aircrafts. There are different types of aircraft lease: wet lease, dry lease, damp lease, operating lease and owned lease.

The business model of aircraft leasing market can be segmented into newer aircraft leasing, mid-life aircraft leasing and old aircraft leasing.

The global aircraft leasing market is projected to rise tremendously in next four-five years i.e. 2016-2020. The global aircraft leasing market is expected to increase due to increasing air passenger traffic, rising GDP per-capita and increasing international tourist level, etc. Yet the market faces some challenges such as, high-maintenance of aircrafts, social and geo-political upheaval, foreign exchange volatility, intense competition, etc.
