Anaesthesia Machines Market: By Type (Stand Alone Machine, Portable Machine, Work Station) & Geography-Forecast (2014-2021)

Description:
Anaesthesia is the use of medicine in order to prevent or reduce the feeling of pain or sensation during surgery or other painful procedures (such as getting stitches). Anaesthetic medicines is given as an injection or through inhaled gases or vapors, different types of anaesthesia affect the nervous system in various ways by blocking nerve impulses and, therefore, pain. General anaesthesia has three main objectives like lack of movement (paralysis), unconsciousness, and blunting of the stress response. In today’s medical science anaesthesiology holds a special importance in the hospital care system making anaesthesia machines a very important equipment in the hospitals. Anaesthesiology is aimed at ensuring the safest possible surgical experience for the patients resulting into evolution of the anaesthesia machines from simple pneumatic devices to sophisticated, computer based and integrated anaesthesia machines. Increasing usage of the robots and machines into medical science and increasing medical tourism to developing nations are expected to remain the prime growth drivers during the period of study for anaesthesia machines.
