Oilseed Crops. Yield and Adaptations under Environmental Stress

Description: Oil Seed Crops: Yield and Adaptations under Environmental Stress is a state–of–the–art reference that investigates the effect of environmental stress on oil seed crops and outlines effective ways to reduce stress and improve crop yield. With attention to physiological, biochemical, molecular, and transgenic approaches, the chapters discuss a variety of oil seed crops and also cover a broad range of environmental stressors including microbes, salt, heavy metals, and climate change. Featuring up-to-date research from a global group of experts, this reference provides innovative recommendations for mitigating environmental stress and promoting the healthy growth, development, and adaptation of crops.
