The U.K. Temperature Control Market - Analysis & Forecast, 2016-2022

Description:
In the recent past there has been a lot of advancements in the temperature control markets with a number of product ranges being launched and the earlier existing products that have been upgraded like the chillers, boilers and various other temperature control devices. All these upgrades and launches have been conducted to primarily focus on the use of lower GWP refrigerants/chemical and substances which are non-ozone depleting and using eco-friendly ones.

In addition to this there is a lot of work being done in the research and development of the companies and companies are investing substantially to make their existing systems more efficient and to lower down their carbon foot prints, primarily focusing to be environment friendly and this drift is mainly driven by the government policies and regulations which have made the companies work upon the existing technologies and make them much more sustainable.

Government regulations and standards are playing a major role in sustaining the growth and development of the market. The main aim of these regulations is to ensure that the temperature control market focuses towards reducing its carbon foot print and increasing their energy efficiency, which not only protects the environment but also reduces the usage cost. To achieve these goals, the government has undertaken initiatives like the Carbon Reduction Commitment (CRC) Energy Efficiency Scheme, F-gases regulations, restriction on the usage of ozone depletion substances and incentives for the usage of the renewable sources of energy, among others.
