Description: Cenospheres are lightweight, hollow spheres that naturally occur as a byproduct of coal combustion at thermal power plants. Cenospheres are largely made of silica and alumina and are filled with air or inert gas. They are very easy to handle, have high insulation characteristics and due to their inert properties, they remain unaffected by solvents, water, acids and alkalis. Owing to all these positive sides, cenospheres have been vastly employed in various industries. The rising demand from end-user industries such as automotive, oil & gas will positively impact the market for cenospheres.

The global cenospheres market has been analyzed with respect to different parameters such as demand, supply, end-users and providers of cenospheres. Cenospheres market is categorized by Types, applications and end-user of the industry. On the basis of types of cenospheres, the report is segmented into white cenospheres, grey cenospheres and other types of cenospheres.
