Global Small Arms Market - Analysis and Forecast (2016-2022)

Description: Global small arms market is a well-established industry with a few reputed players. But with the waning geopolitical situation fraught with sectarian wars in the Middle East, political instability and local armed insurgencies, the demand for small arms is set to grow rapidly in the coming years. The global small arms market is expected to reach $5695.86 million by 2022.

Small arms are the fundamental weapons of war and are also used for recreational purposes. Technically, “small arms” is a term which refers to the use of firearms for military purpose but when the same is used for recreational activities like hunting and shooting, it is termed as “firearms”. With the changing dynamics of geopolitics, there has been a visible shift in the behavior of nation states using military forces as an instrument for their national security policy. Hence they use them to deal with both the domestic as well as international security requirements. Apart from that, the protracted political and sectarian upheavals in the Middle East has led to mass immigration to the European states thereby creating law and order complications in the region. These developments as a whole will create demand for the small arms as it influences sovereign nations to modernize their military and law enforcement agencies.
