Global Water Pumps Market By Type (Centrifugal and Positive Displacement Pumps), By End User (Industrial and Non Industrial), By Region (Asia-Pacific, Europe, North America, South America, etc.), Competition Forecast and Opportunities, 2011-2025

Description:

Water pump is a mechanical device that imparts energy to fluid in order to raise, compress or transfer fluids. Rapid industrialization and urbanization in developing countries is propelling demand for water pumps across various end user segments.

Water pumps are used to provide continuous water supply in hospitals, residential, commercial and industrial facilities, and others modern infrastructure. Moreover, increasing installation of water recycling and water & wastewater treatment systems, especially in China and India, for desalination and cleaning wastewater generated by municipalities and other industries is projected to boost demand for water pumps. Oil & gas, chemicals, food & beverage and pharmaceuticals are the other major demand generators for water pumps across the globe.

According to "Global Water Pumps Market By Type, By End User, By Region, Competition Forecast and Opportunities, 2011-2025", the global water pumps market is projected to cross US$ 67 billion by 2025, on account of increasing water scarcity, and growing need to upgrade existing water pump base and replace older pumps.

Although centrifugal pumps dominate demand for water pumps across the globe, demand for positive displacement pumps is projected to grow at a robust pace, on account of their versatility of application and low maintenance. Additionally, Asia-Pacific dominated global demand for water pumps, due to growing industrialization in major developing economies. Some of the leading players operating in global water pumps market include GRUNDFOS Holding, Flowserve, Sulzer, Xylem, Torishima Pump and Kirloskar Brothers, etc.,
