Steel Rebar Market: By Finishing (Black, Epoxy, Coated) End-Use Industry (Construction & Infrastructure, Manufacturing, Oil and Gas) & By Geography (Europe, Asia Pacific, North America, Rest of the World)-Forecast (2016-2021)

Description: Reinforcing bar, also called rebar, is a common steel bar that is hot rolled and is used widely in the construction industry, especially for concrete reinforcement. Steel rebar is most commonly used as a tensioning devise to reinforce concrete and other masonry structures to help hold the concrete in a compressed state. Concrete is a material that is very strong in compression, but virtually without strength in tension. To compensate for this imbalance in a concrete slab's behavior, reinforcement bar is cast into it to carry the tensile loads. Globally increasing construction activities and advancement of construction technologies is expected to drive the global demand during the period of study.

Geographically North America dominated steel rebar market owing to the large scale demand of steel rebar into construction, oil & gas industry in the region. North America was followed by Asia-Pacific and Europe as second and third largest market for steel rebar market. Asia Pacific is projected to have fastest growth, owing to rapidly developing infrastructure as a result of growing construction industry and, expanding manufacturing base and government initiatives for stricter building & construction regulations in developing nations such as China, and India in this region.
