Tackifier Market: By End-use Industry (Packaging, Bookbinding, Nonwoven, Construction/Assembly), Type (Synthetic & Natural); By Form (Solid, Liquid, Resin Dispersion) & By Region (Europe, Asia-Pacific)-Forecast (2016-2021)

Description: Tackifiers are usually resins and can be classified as chemical compounds which are used in formulating adhesives applications to increase the tack, the stickiness of the surface of the adhesive. Tackifiers usually have low-molecular weight with high glass transition temperature and provide higher stress compliance at slow strain rate. Globally increasing packaging industry due to growth of the major end-use industries is expected to drive the demand for tackifiers during the period of study.

Geographically, Asia-Pacific dominates the tackifier market driven by higher demand for a wide range of applications in huge industrial bases especially from the packaging industry in the region. Asia-Pacific was followed by RoW and Europe as second and third largest markets for the tackifier market. Asia Pacific is projected to have the fastest growth, owing to rapidly increasing applications in large and expanding industrial bases in the region, especially in developing nations such as China and India.
