Global Automotive Wiring Harness Market 2016-2020

Description: About Automotive Wiring Harness

An automotive wiring harness is an assembly of electric wires or cables and other components such as connectors and clamps used to transfer information and power among the electronic components of a vehicle. It is also known as a wiring loom for vehicles. Electric wires are tied together with the help of different components such as cable ties, electrical tapes, conduits, or a combination of these to form the complete wiring assembly. An automotive wiring harness safeguards the wires against the impact of vibrations. In addition, it also safeguards the components from abrasions and moisture. The design of the automotive wiring harness has become more complicated with an increase in the number of connected components in vehicles. Companies have developed design software like computer-aided design (CAD) tools to design automotive wiring harnesses.

Analysts forecast the global automotive wiring harness market to grow at a CAGR of 6% during the period 2016-2020.
