Global Retail Self-checkout Terminals Market 2017-2021

Description:

About Retail Self-checkout Terminals

In a retail outlet, a self-checkout terminal is a self-service transaction system that enables consumers to make payments for their purchases by themselves. The system offers convenience and privacy as it eliminates the need for a cashier or an attendant. The system includes a barcode scanner, weighing scale, touchscreen display, cash reader, card reader, and a deposit unit. The unique selling point of a self-checkout terminal is its ability to control cost by eliminating labor expense in a retail setup. In addition, as stated, speed, privacy, and convenience are other key advantages that are leading to the increased adoption of self-checkout machines on a wider scale, globally.

The analysts forecast the global retail self-checkout terminals market to grow at a CAGR of 17.76% during the period 2017-2021.
