Pharmacy Automation Systems Market: By Product Type (Medication Dispensing Systems, Packaging and Labeling Systems, Table-top Counters); By End-User (Inpatient Pharmacy Automation, Outpatient Pharmacy Automation) & By Region-Forecast (2016-2022)

Description:
Pharmacy automation is the process which involves the automation of manual processes of handling and distributing medications in order to reduce or minimize the incidences of deaths and injuries due to medication prescription errors which is consistently putting pressure on healthcare providers and pharmacists to deploy more effective technologies. Pharmacy automation involves automation of tablet counting, compound preparation, prescription management, medication packaging, dispensing and inventory management, hence reducing the overall cost and also increasing the efficiency. Globally, increasing deaths and injuries coupled with increasing awareness about benefits of using such systems amongst pharmacists is expected to remain the key growth driver during the period of study.

Geographically, North America dominated the pharmacy automation systems market driven by higher penetration of automated systems at retail level and higher spending on technology by retail establishments in the region. North America was followed by Europe and Asia-Pacific as second and third largest market for the pharmacy automation systems market. Asia Pacific is projected to have the fastest growth, owing to increased demand for pharmacy automation systems in the emerging countries such as China and India.
