Global Internal Combustion Engine Market 2017-2021

Description: About Internal Combustion Engine

Various types of combustion engines were developed and tested during the second half of the 19th century. In the following decade, many such engines were produced with a power delivery of 6 HP and efficiency around 5%. This was followed by the introduction of the Otto-Langen engines in 1867 with enhanced efficiency up to 10%. It was during this time that the basic four-stroke engines that are used in modern day automobiles evolved and were considered as the best design.

The analysts forecast the global internal combustion engine market to grow at a CAGR of 7% during the period 2017-2021.
